

**NCERT SOLUTIONS-
CHAPTER-7-
WEATHER,CLIMATE AND ADAPTATIONS-**

Q.1.Name the elements that determine the weather of a place.

Ans. The temperature, humidity, rainfall, wind-speed, etc. are called the elements that determine the weather of a place.

Q.2. When are the maximum and minimum temperature likely to occur during the day?

Ans.The maximum temperature of the day occurs generally in the afternoon and the minimum temperature occurs in the early morning.

Q.3.Fill in the blanks

(i) The average weather taken over a long time is called _____

(ii) A place receives very little rainfall and the temperature is high throughout the year, the climate of that place will be _____ and _____

(iii) The two regions of the earth with extreme climatic conditions are _____ and _____

Ans. climate of the place (ii) hot, dry (iii) polar, tropical regions

Q.4.Indicate the type of climate of the following areas:

(a) Jammu and Kashmir:

(b) Kerala:

(c) Rajasthan:

(d) North-east India:

Ans.(a) Jammu and Kashmir—moderately hot and moderately wet climate.

(b) Kerala—very hot and wet climate.

(c) Rajasthan—hot and dry climate.

(d) North-east India—The north eastern India receives rain for a major part of the year, hence the wet climate.

Q.5.Which of the two changes frequently, weather or climate?

Ans.Weather

Q.6.Followings are some of the characteristics of animals:

(i) Diets heavy on fruits , (ii) White fur (iii) Need to migrate (iv) Loud voice

(v) Sticky pads on feet (vi) Layer of fat under skin

(vii) Wide and large paws (viii) Bright colours

(ix) Strong tails (x) Long and large beak

Each characteristic indicates whether it is an adaptation for tropical rainforests or polar regions. Do you think that some of these characteristics can be adapted for both regions?

Ans:

<i>Characteristics of animals</i>	<i>Adaption for</i>
(i) Diets heavy on fruits	— tropical rainforests
(ii) White fur	— polar regions
(iii) Need to migrate	— polar regions
(iv) Loud voice	— tropical rainforests
(v) Sticky pads on feet	— tropical rainforests
(vi) Layer of fat under skin	— polar regions
(vii) Wide and large paws	— polar regions
(viii) Bright colours	— tropical rainforests
(ix) Strong tails	— tropical rainforests
(x) Long and large beak	— tropical rainforests

Q.7. The tropical rainforests have a large population of animals. Explain why it is so.

Ans. Because of continuous warmth and rain, the tropical region supports an enormous number and a wide variety of animals

Q.8.Explain with examples, why we find animals of certain kinds living in particular climatic conditions.

Ans. Animals are adapted to survive in the conditions in which they live. Features and habits which help them to adapt to their surroundings are the result of evolution. So, to survive in a particular type of climate the animals

must have certain adapted features. This is the reason we find animals of certain kinds living in particular climatic conditions. For example, animals in the polar region are adapted to the extremely cold climate. They have special characteristics, such as white fur, strong sense of smell, a layer of fat under the skin, wide and large paws for swimming and walking in snow etc

Q.9. How do elephants living in the tropical rainforests adapt themselves?

Ans. The elephant has adapted to the conditions of the rainforest in many remarkable ways. It has a trunk that it uses as a nose because of this it has a strong sense of smell. The trunk is also used for picking up food. Its tusks are modified teeth. These can tear the bark of trees that an elephant loves to eat. So, the elephant is able to handle the competition for food very well. Large ears of the elephant help it to hear even very soft sounds. They also help the elephant to keep cool in the hot* humid climate of the rainforest.

Q.10. Choose the correct option which answers the following question:

A carnivore with stripes on its body moves very fast while catching its prey. It is likely to be found in:

(i) polar regions (ii) deserts

(iii) oceans (iv) tropical rainforests

Ans. (iv) tropical rainforests

Q.11. Which features adapt polar bears to live in extremely cold climates?

(i) A white fur, fat below skin, keen sense of smell.

(ii) Thin skin, large eyes, a white fur.

(iii) A long tail, strong claws, white large paws.

(iv) White body, paws for swimming, gills for respiration.

Ans.(iv) A white fur, fat below skin, keen sense of smell.

Q.12.Which option best describes a tropical region?

(i) hot and humid

(ii) moderate temperature, heavy rainfall (iii) cold and humid (iv) hot and dry

Ans.(i) Hot and humid
